📒 Accounting Module — Manual Testing Guide

> ***Project:*** *GTR Service / Multi-Tenant ERP*
> ***Module:*** *Accounting*
> ***Date:*** *July 2026*
> ***Currency:*** *AED (UAE Dirham, default)*
> ***Base URL (frontend):*** `http://localhost:5173/account-dashboard`

📋 Table of Contents

#	Section	Sidebar Label
1	Chart of Accounts	Master Data → Chart of Accounts
2	Item GL Accounts	GL Configuration → Item GL Accounts
3	Party GL Accounts	GL Configuration → Party GL Accounts
4	Journal Entries	Transactions → Journal Entries
5	Payments Register	Payments & Settlements → Payments Register
6	Mutual Settlements	Payments & Settlements → Mutual Settlements
7	Banks	Cash Management → Banks
8	Bank Accounts	Cash Management → Bank Accounts
9	Bank Reconciliation	Cash Management → Bank Reconciliation
10	AR Sub-Ledger	Sub-Ledgers → AR
11	AP Sub-Ledger	Sub-Ledgers → AP
12	Employee Sub-Ledger	Sub-Ledgers → Employee
13	Bank Sub-Ledger	Sub-Ledgers → Bank
14	Inventory Sub-Ledger	Sub-Ledgers → Inventory
15	Fixed Asset Sub-Ledger	Sub-Ledgers → Fixed Assets
16	Sub-Ledger Reconciliation Dashboard	Sub-Ledgers → Reconciliation
17	VAT Dashboard	VAT/Tax → VAT Dashboard
18	VAT Setup	VAT/Tax → VAT Setup

19	Tax Adjustments	VAT/Tax → Tax Adjustments
20	VAT Return	VAT/Tax → VAT Return
21	VAT Reports	VAT/Tax → VAT Reports
22	GL Reports	GL Reports

Pre-Requisites Before Testing

Before testing any accounting feature, ensure the following are available in the system:

- ✅ At least one **Company / Tenant** configured
- ✅ At least one **Customer** (Party with type CUSTOMER)
- ✅ At least one **Supplier** (Party with type SUPPLIER)
- ✅ At least one **Item** (Product/Raw Material/Finished Good)
- ✅ At least one **Bank** and **Bank Account** configured
- ✅ Admin user login credentials

---

1. Chart of Accounts

📖 What is it?

The **Chart of Accounts (COA)** is the master list of all General Ledger (GL) accounts used in the system. It defines the financial structure of the company — grouping accounts into Balance Sheet sections (Assets, Liabilities, Equity) and Income Statement sections (Revenue, Expenses). Every financial transaction ultimately posts to one or more GL accounts defined here.

📍 Navigation

`Accounting → Chart of Accounts`

URL: `/account-dashboard/chart-of-accounts`

🔍 Page Overview

The COA page has two views:

- **Tree View** (default): Shows accounts in a hierarchical collapsible tree (parent → child groups → leaf accounts)
- **List View**: Flat scrollable table of all accounts

Columns Explained

Column	Meaning
Code	Unique account code (e.g., `1010100`). Codes are read-only after creation
Description	Human-readable name of the account
Section	The balance sheet / P&L section (e.g., `BS_FIXED_ASSETS`, `ACCOUNTS_GROUP`)
Type	`DR` = Debit-normal account, `CR` = Credit-normal account, `DR/CR` = Both (group)
Active	✓ checkmark = account is active and can be used in transactions
Cur	Currency this account is denominated in (e.g., `AED`)
Qty	✓ = tracks quantity in addition to amount (used for inventory accounts)
Off-Bal	✓ = Off-balance sheet account (contingent items, guarantees)
Dimensions	Tags linked to this account for sub-ledger drill-down (e.g., `FIXED_ASSET`, `ITEM`)
Actions	👁️ View detail, ✏️ Edit, □ Toggle Active/Inactive

✅ Test Cases — COA List Page

TC-COA-01: View Chart of Accounts (Tree View)

Steps:

1. Navigate to `Accounting → Chart of Accounts`
2. Ensure **Tree View** toggle is selected (folder icon, top right)
3. Observe the hierarchical list

Expected Result:

- Accounts load and display in tree format
- Parent groups (e.g., `1000000 Non-Current Assets`) are bold and in primary color
- Child accounts are indented under their parents
- Collapse/expand works on clicking the `►` / `▼` arrow

TC-COA-02: View Chart of Accounts (List/Flat View)

Steps:

1. Click the **List View** icon (list icon, top right)

Expected Result:

- All accounts appear in a flat sorted table
- Each row shows: Code, Description, Type, Section, Parent Group, Status, Actions

---

TC-COA-03: Search Accounts

Steps:

1. In the search bar, type `Fixed Assets`
2. Observe filtered results

Expected Result:

- Only accounts whose Code or Description contains "Fixed Assets" remain visible
- In Tree View, parent nodes stay expanded if any child matches

---

TC-COA-04: Create New Account (Leaf Account)

Steps:

1. Click **+ New Account** button (top right)
2. Fill in the form:
   - **Account Code:** `1010150`
   - **Description:** `Land & Buildings`
   - **Account Type:** `DEBIT`
   - **Section:** `BS_FIXED_ASSETS`
   - **Parent Account:** Select `1010000 - Property, Plant and Equipment`
   - **Currency:** `AED`
   - **Is Quantitative:** Leave unchecked
   - **Is Off-Balance:** Leave unchecked
   - **Dimension Tracking:** Select `Fixed Asset`
   - **Details/Notes:** `For land and building assets`
3. Click **Save Account**

Expected Result:

- Success toast: "Account created successfully!"
- New account appears in COA list under its parent group
- Dimensions column shows `FIXED_ASSET`

TC-COA-05: Create New Account With a New Parent Group

Steps:

1. Click **+ New Account**
2. In the **Parent Account** field, click **"Create New Parent Group"** link
3. Enter:
   - **Parent Code:** `1090000`
   - **Parent Description:** `Other Long-Term Assets`
4. Fill in the child account details:
   - **Account Code:** `1090100`
   - **Description:** `Security Deposits`
   - **Type:** `DEBIT`
   - **Section:** `BS_OTHER_ASSETS`
5. Click **Save Account**

Expected Result:

- System first creates the parent group `1090000`, then the child
- Both appear in COA tree
- Toast: "Parent group Other Long-Term Assets created!" then "Account created successfully!"

TC-COA-06: Edit an Existing Account

Steps:

1. Find an account (e.g., `1010100 Fixed Assets at Cost`)
2. Click the ✏️ (Edit) icon
3. Change **Description** to `Fixed Assets at Cost (Revised)`
4. Toggle on **Is Quantitative**
5. Click **Save Account**

Expected Result:

- Account code field is disabled (cannot be changed)
- Description updates successfully
- Quantitative checkbox is now ticked
- Toast: "Account updated successfully!"

TC-COA-07: Toggle Account Active/Inactive

Steps:

1. Find an active account
2. Click the □ (Power) icon → confirm deactivation
3. Verify it becomes inactive (no ✓ in Active column)
4. Click □ again to reactivate

Expected Result:

- Toast on deactivate: "Account deactivated successfully!"
- Toast on activate: "Account activated successfully!"
- `Active` column checkmark toggles accordingly

TC-COA-08: Delete Account (List View Only)

Steps:

1. Switch to **List View**
2. Find a leaf account with no transactions
3. Click the 🗑️ (Trash) icon
4. Confirm deletion in the dialog

Expected Result:

- Account is removed from the list
- Toast: "Account deleted successfully!"
- **Note:** Accounts with posted transactions cannot be deleted (error expected)

❌ Negative Test Cases

Test	Steps	Expected Error
TC-COA-N01	Create account without Account Code	Click Save without filling Code
TC-COA-N02	Duplicate Account Code	Use an existing code (e.g., `1010100`)
TC-COA-N03	No section selected	Leave Section blank, click Save
TC-COA-N04	Delete account used in transactions	Try to delete an active GL account

---

2. Item GL Accounts

📖 What is it?

Item GL Accounts maps each inventory item (Product, Raw Material, Finished Good, Semi-Finished) to its corresponding GL accounts. When a purchase or sale is posted, the system uses this mapping to automatically determine which GL account to debit/credit. This is the bridge between the inventory/sales module and the accounting module.

📍 Navigation

`Accounting → GL Configuration → Item GL Accounts`

URL: `/account-dashboard/item-gl-accounts`

🔧 Mapping Fields Explained

Field	Purpose
Inventory / Purchase A/C	GL account debited when items are purchased or received into stock
Sales Revenue A/C	GL account credited when items are sold (revenue recognition)
COGS A/C	Cost of Goods Sold — debited when goods are shipped/sold
Input VAT A/C	VAT account used on purchases (recoverable VAT)
Output VAT A/C	VAT account used on sales (VAT collected from customer)
Trade Discounts A/C	GL account for discounts given or received on trades
Deferred Expenses A/C	For prepaid purchases that span future periods
Goods on Consignment A/C	For items held on consignment (not fully owned)

✅ Test Cases — Item GL Accounts

TC-ITEMGL-01: View Existing Item Mappings

Steps:

1. Navigate to `GL Configuration → Item GL Accounts`
2. Observe the table

Expected Result:

- Table shows all existing item-to-GL mappings
- Columns: Item ID, Inventory A/C, Sales Revenue A/C, COGS A/C, Input VAT, Output VAT

TC-ITEMGL-02: Create New Item GL Mapping

Steps:

1. Click **+ New Item Mapping**
2. In the slide-out drawer:
   - **Item:** Type a product name in search (e.g., `Steel Hanger`) → select from dropdown
   - **Inventory / Purchases Account:** Search and select `Inventory Account` (e.g., `3110100`)
   - **Sales Revenue Account:** Select `Sales Revenue` account
   - **COGS Account:** Select `Cost of Goods Sold` account
   - **Input VAT Account:** Select `Input VAT 5%` account
   - **Output VAT Account:** Select `Output VAT 5%` account
3. Click **Save Mapping**

Expected Result:

- Drawer closes
- New mapping row appears in the table
- Toast: "Item GL mapping created!"

TC-ITEMGL-03: Edit Existing Mapping

Steps:

1. Click ✏️ Edit on an existing mapping
2. Change the **Sales Revenue Account** to a different GL account
3. Click **Save Mapping**

Expected Result:

- Mapping updated
- Toast: "Item GL mapping updated!"

TC-ITEMGL-04: Delete a Mapping

Steps:

1. Click 🗑️ Delete on a mapping
2. Confirm in the browser dialog

Expected Result:

- Mapping removed from table
- Toast: "Mapping deleted successfully!"

❌ Negative Tests

Test	Steps	Expected
TC-ITEMGL-N01	Save without selecting an item	Click Save Mapping with Item field empty
TC-ITEMGL-N02	Duplicate item mapping	Select the same item again and save

---

3. Party GL Accounts

📖 What is it?

Party GL Accounts maps customers and suppliers to their dedicated GL accounts (Accounts Receivable / Accounts Payable). When invoices are posted, the system uses these to debit the customer's AR account or credit the supplier's AP account automatically.

📍 Navigation

`Accounting → GL Configuration → Party GL Accounts`

URL: `/account-dashboard/party-gl-accounts`

🔧 Mapping Fields

Field	Purpose
Accounts Receivable A/C	GL account debited when customer is invoiced
Accounts Payable A/C	GL account credited when supplier invoices us
Advance Received A/C	For prepayments received from customers
Advance Paid A/C	For prepayments made to suppliers

✅ Test Cases — Party GL Accounts

TC-PARTYGL-01: View Party Mappings

Steps:

1. Navigate to `GL Configuration → Party GL Accounts`

2. Observe existing mappings

Expected Result:

- Table shows Party ID, Party Name, AR Account, AP Account

TC-PARTYGL-02: Create Party GL Mapping

Steps:

1. Click **+ New Party Mapping**
2. Select a **Party** (e.g., customer: `Global Supplies Ltd`)
3. Set **Accounts Receivable A/C** to `Trade Receivables` (e.g., account `2110100`)
4. Set **Advance Received A/C** if applicable
5. Click **Save Mapping**

Expected Result:

- Mapping saved and listed in table

TC-PARTYGL-03: Edit Party Mapping

Steps:

1. Edit an existing party mapping
2. Change the AR account
3. Save

Expected Result:

- Updated correctly, toast confirmation shown

---

4. Journal Entries

📖 What is it?

Journal Entries are the fundamental building blocks of all accounting. A journal entry records a financial event by debiting one or more GL accounts and crediting one or more GL accounts, ensuring the accounting equation stays balanced (Total Debits = Total Credits). The system enforces this rule strictly.

Journal entries have a **lifecycle**: `DRAFT → POSTED → (REVERSED)`

📍 Navigation

`Accounting → Transactions → Journal Entries`

URL: `/account-dashboard/journal-entries`

📋 Journal Entry Header Fields

Field	Required	Description
Entry Number	Auto	System-generated (read-only)
Entry Date	✅	The accounting date for this entry
Document Type	✅	Nature of the entry (see types below)
Due Date	Conditional	Required for Invoice/Credit/Debit Note types
Description	✅	Brief reason for this journal entry
Reference Number	Optional	Invoice number, receipt ID, or external ref

📄 Document Types Explained

Type	When Used
`MANUAL_JOURNAL`	Ad-hoc corrections, accruals, adjustments
`OPENING_BALANCE`	One-time entry to set up opening balances
`CUSTOMER_INVOICE`	Posted when a customer is invoiced
`SUPPLIER_INVOICE`	Posted when a supplier bill is received
`CREDIT_NOTE`	Customer return / credit to customer
`DEBIT_NOTE`	Supplier return / debit to supplier
`PAYMENT_VOUCHER_BANK`	Bank payment to supplier
`RECEIPT_VOUCHER_BANK`	Bank receipt from customer

📋 Journal Line Fields

Field	Required	Description
Line #	Auto	Sequential line number
GL Account	✅	The account to debit or credit

Debit Amount	Conditional	Amount to debit (cannot have both Dr & Cr on same line)
Credit Amount	Conditional	Amount to credit (cannot have both Dr & Cr on same line)
Line Description	Optional	Additional detail for this specific line
Dimension: Company	Optional	Link to a customer/supplier for sub-ledger
Dimension: Item	Optional	Link to an inventory item
Dimension: Employee	Optional	Link to an employee
Dimension: Bank Account	Optional	Link to a bank account
Dimension: Fixed Asset	Optional	Link to a fixed asset

✅ Test Cases — Journal Entries

TC-JE-01: View Journal Entry List

Steps:

1. Navigate to `Transactions → Journal Entries`
2. Observe the list

Expected Result:

- Table shows: Entry Number, Date, Type, Description, Total Debit, Total Credit, Status
- Status badges: `DRAFT` (gray), `POSTED` (green)
- Filter/search bar available

TC-JE-02: Create a Manual Journal Entry (Balanced)

Scenario: Record office supplies expense of AED 500 paid from petty cash.

Steps:

1. Click **+ New Journal Entry**
2. Fill header:
   - **Entry Date:** Today's date
   - **Document Type:** `Manual Journal`
   - **Description:** `Office supplies purchase - petty cash`
   - **Reference Number:** `RCP-2026-001`
3. Fill Line 1 (Debit):
   - **GL Account:** `Office Supplies Expense` (e.g., `5010100`)

- **Debit Amount:** `500`

4. Fill Line 2 (Credit):
   - **GL Account:** `Petty Cash` (e.g., `1110100`)
   - **Credit Amount:** `500`
5. Click **Save Draft**

Expected Result:

- Toast: "Journal entry created as draft!"
- Entry appears in list with status `DRAFT`
- Entry Number is auto-generated (e.g., `JE-2026-0001`)

TC-JE-03: Post a Draft Journal Entry

Steps:

1. Open the draft entry from TC-JE-02
2. Click **Edit** (pencil icon)
3. Verify all details are correct
4. Click **Post Entry** button

Expected Result:

- Toast: "Journal entry posted successfully!"
- Status changes to `POSTED`
- Edit button is disabled (posted entries cannot be edited)

TC-JE-04: Create and Directly Post

Scenario: Record rent expense payment via bank transfer.

Steps:

1. Click **+ New Journal Entry**
2. Fill:
   - **Description:** `Monthly office rent - July 2026`
   - **Document Type:** `Bank Payment`
3. Line 1: Debit `Rent Expense` AED 10,000
4. Line 2: Credit `Bank Account` (linked to bank account dimension) AED 10,000
5. Click **Post Entry** (skips draft)

Expected Result:

- Entry is created AND posted in one step
- Toast: "Journal entry created as draft!" then "Journal entry posted successfully!"

TC-JE-05: Create Opening Balance Entry

Scenario: Set up opening balance for a new fiscal year.

Steps:

1. Click **+ New Journal Entry**
2. **Document Type:** `Opening Balance`
3. **Description:** `Opening balances FY2026`
4. Add multiple lines representing asset and liability opening balances
5. Ensure Total Debit = Total Credit
6. Click **Post Entry**

Expected Result:

- Posted successfully
- Balances reflected in respective GL accounts

TC-JE-06: Add Dimension Tags to Journal Lines

Scenario: Record customer invoice with AR sub-ledger tracking.

Steps:

1. Create new journal entry: Type = `Customer Invoice`
2. Line 1: Debit `Trade Receivables` AED 5,000
    - In the line, set **Dimension: Company** → select the customer party
3. Line 2: Credit `Sales Revenue` AED 5,000
    - Set **Dimension: Item** → select sold product
4. Post the entry

Expected Result:

- Entry posted
- AR sub-ledger for that customer is updated with AED 5,000 outstanding
- Inventory sub-ledger reflects the sold item

❌ Negative Test Cases — Journal Entries

Test	Steps	Expected Error
TC-JE-N01	Unbalanced entry	Line 1 Dr: 1000, Line 2 Cr: 900, click Post
TC-JE-N02	Both Dr & Cr on same line	Enter 500 in both Debit and Credit fields for one line
TC-JE-N03	Missing description	Leave Description blank, click Save
TC-JE-N04	Only one line	Add only 1 journal line
TC-JE-N05	Edit a POSTED entry	Try to edit a posted entry
TC-JE-N06	Line with zero amount	Debit: 0, Credit: 0 on a line

---

5. Payments Register

📖 What is it?

The **Payments Register** records cash receipts from customers (AR) and cash payments to suppliers (AP). It handles:

- **AR Receipt:** Money received from a customer against their invoices
- **AP Payment:** Money paid to a supplier against their bills
- **Prepayment In:** Advance received from customer (no specific invoice yet)
- **Prepayment Out:** Advance paid to supplier (no bill yet)

The system also supports partial allocation — you can allocate a payment against multiple invoices.

📍 Navigation

`Accounting → Payments & Settlements → Payments Register`

URL: `/account-dashboard/payments`

📋 Payment Form Fields

Field	Required	Description
Payment Type	✅	AR Receipt / AP Payment / Prepayment In / Out
Partner	✅	Customer or Supplier receiving/making the payment
Payment Method	✅	Bank Transfer / Cash / Post Dated Cheque (PDC)
Bank Account	Conditional	Required if method is Bank or PDC
Payment Date	✅	Date the money was received/paid

Amount	✅	Total amount of the payment
Invoice Allocation	Optional	Allocate the payment against outstanding invoices

💡 Allocation Logic

- The right panel shows all outstanding invoices for the selected partner
- Enter an **Allocate** amount against each invoice (max = invoice balance)
- The system shows **Unallocated** balance
- Any unallocated amount is automatically recorded as an advance/prepayment

---

✅ Test Cases — Payments Register

TC-PAY-01: View Payment Register

Steps:

1. Navigate to `Payments & Settlements → Payments Register`
2. Observe the list

Expected Result:

- Table shows: Payment Number, Date, Type, Partner, Amount, Status
- Filter by payment type, date range available

TC-PAY-02: Record AR Receipt (Customer Payment with Full Allocation)

Scenario: Customer `Global Supplies Ltd` pays AED 5,000 against an outstanding invoice.

Steps:

1. Click **+ New Payment**
2. Set:
   - **Payment Type:** `AR Receipt`
   - **Partner:** Select `Global Supplies Ltd`
   - **Payment Method:** `Bank Transfer`
   - **Bank Account:** Select your bank account
   - **Payment Date:** Today
   - **Amount:** `5000`
3. In the right panel, the customer's invoices load automatically
4. In the **Allocate** column next to the AED 5,000 invoice, enter `5000`
5. Verify **Unallocated = AED 0**

6. Click **Create Draft**

Expected Result:

- Toast: "Payment created successfully!"
- Payment appears in register with status `DRAFT`

TC-PAY-03: Record Partial Payment with Advance

Scenario: Customer pays AED 3,000 but has AED 5,000 outstanding invoice.

Steps:

1. Create new AR Receipt
2. Amount: `3000`
3. Allocate `3000` against the AED 5,000 invoice
4. **Unallocated: AED 0** (fully applied to invoice partially)
5. Create Draft

Expected Result:

- Warning banner: "The unallocated amount of AED 0 will be recorded as advance upon posting"
- Payment created, invoice balance reduces to AED 2,000

TC-PAY-04: Record Prepayment (Advance)

Scenario: Customer pays AED 10,000 advance before any invoice.

Steps:

1. **Payment Type:** `Prepayment In`
2. **Partner:** Select customer
3. **Amount:** `10000`
4. No invoice allocation (Unallocated = AED 10,000)
5. Click **Create Draft**

Expected Result:

- Advance recorded against the customer
- Will appear in AR sub-ledger as credit balance

TC-PAY-05: Record AP Payment (Supplier Payment)

Scenario: Pay AED 8,000 to supplier `Metal Parts Co`.

Steps:

1. **Payment Type:** `AP Payment`
2. **Partner:** Select `Metal Parts Co`
3. **Method:** `Bank Transfer`
4. **Bank Account:** Select bank
5. **Amount:** `8000`
6. Allocate against supplier invoice
7. **Create Draft**

Expected Result:

- AP payment recorded
- Supplier invoice partially/fully cleared

TC-PAY-06: Post Dated Cheque (PDC) Payment

Steps:

1. **Payment Type:** `AR Receipt` or `AP Payment`
2. **Payment Method:** `PDC`
3. **Bank Account:** Select bank account
4. Enter date, amount, allocate
5. Create Draft

Expected Result:

- PDC payment recorded
- Will be tracked separately in PDC register

❌ Negative Tests — Payments

Test	Steps	Expected
TC-PAY-N01	Missing required fields	Leave Amount or Partner empty, click Create
TC-PAY-N02	Overallocate	Allocate more than invoice balance
TC-PAY-N03	Bank required for Bank method	Select Bank method but no bank account

---

6. Mutual Settlements

📖 What is it?

Mutual Settlements handle the netting of payables and receivables when a party is both a customer AND a supplier. Instead of making two separate payments, you settle the net difference. For example: Customer owes you AED 10,000 and you owe them AED 6,000 → settle by collecting only AED 4,000.

📍 Navigation

`Accounting → Payments & Settlements → Mutual Settlements`
URL: `/account-dashboard/settlements`

✅ Test Cases — Mutual Settlements

TC-SETTLE-01: View Settlement Register

Steps:

1. Navigate to `Payments & Settlements → Mutual Settlements`

Expected Result:

- List of all existing mutual settlements with status, parties, amounts

---

TC-SETTLE-02: Create Mutual Settlement

Steps:

1. Click **+ New Settlement**
2. Select the **Party** that appears on both sides (customer + supplier)
3. System shows: AR balance and AP balance for that party
4. Enter **Settlement Amount** (the net)
5. Save

Expected Result:

- Both AR and AP balances reduced by the settlement amount
- Settlement journal entry auto-posted

---

7. Banks

📖 What is it?

The **Banks** master stores the list of banks (financial institutions) your company has relationships with (e.g., Emirates NBD, Abu Dhabi Commercial Bank). This is a prerequisite before creating bank accounts.

📍 Navigation

`Accounting → Cash Management → Banks`
URL: `/account-dashboard/banks`

✅ Test Cases — Banks

TC-BANK-01: View Banks List

Steps:

1. Navigate to `Cash Management → Banks`

Expected Result:

- Table of configured banks: Name, SWIFT Code, Country, Status

---

TC-BANK-02: Add New Bank

Steps:

1. Click **+ Add Bank**
2. Fill:
    - **Bank Name:** `Emirates NBD`
    - **SWIFT Code:** `EBILAEAD`
    - **Country:** `United Arab Emirates`
3. Save

Expected Result:

- Bank saved and listed

TC-BANK-03: Edit Bank

Steps:

1. Click edit on an existing bank
2. Change SWIFT code
3. Save

Expected Result: Updated successfully

---

8. Bank Accounts

📖 What is it?

Bank Accounts stores specific bank accounts (checking accounts, savings accounts) your company uses for payments and receipts. Each bank account is linked to a Bank master record and mapped to a GL account.

📍 Navigation

`Accounting → Cash Management → Bank Accounts`

URL: `/account-dashboard/bank-accounts`

📋 Bank Account Fields

Field	Description
Account Name	Friendly name (e.g., "Main Operating Account")
Account Number	Full IBAN or account number
Bank	Reference to Banks master
Currency	Account currency (AED, USD, etc.)
GL Account	The GL account mapped to this bank account
Opening Balance	Starting balance if not zero

✅ Test Cases — Bank Accounts

TC-BKACC-01: View Bank Accounts

Steps:

1. Navigate to `Cash Management → Bank Accounts`

Expected Result:

- List of all bank accounts with name, number, bank, currency, balance

---

TC-BKACC-02: Create Bank Account

Steps:

1. Click **+ New Bank Account**
2. Fill:
    - **Account Name:** `Main Operations - AED`
    - **Account Number:** `AE070331234567890123456`
    - **Bank:** Select `Emirates NBD`
    - **Currency:** `AED`
    - **GL Account:** Select the `Bank - Emirates NBD` GL account
3. Save

Expected Result:

- Bank account created and available for payments, reconciliation

---

9. Bank Reconciliation

📖 What is it?

Bank Reconciliation is the process of matching your internal General Ledger bank entries with the actual bank statement from your bank. The goal is to ensure both records agree — catching any missing entries, timing differences, or errors.

Process Flow:

1. Create a new reconciliation session for a bank account + period
2. Import bank statement lines (from bank CSV/file)
3. Auto-match or manually match statement lines with GL entries
4. Investigate any unmatched items
5. Mark reconciliation as Complete

📍 Navigation

`Accounting → Cash Management → Bank Reconciliation`
URL: `/account-dashboard/bank-reconciliation`

✅ Test Cases — Bank Reconciliation

TC-REC-01: View Reconciliation List

Steps:

1. Navigate to `Cash Management → Bank Reconciliation`

Expected Result:

- Table shows reconciliation sessions: Bank Account, Period, Status (Open/Complete), Difference

---

TC-REC-02: Start New Reconciliation

Steps:

1. Click **+ New Reconciliation**
2. Select **Bank Account** and **Period** (month/year)
3. Click Create

Expected Result:

- New reconciliation session created with status `Open`

TC-REC-03: Open Reconciliation Workspace

Steps:

1. Click **Open Workspace** on a reconciliation session
2. Observe the two-column workspace

Expected Result:

- **Left Column:** Bank Statement Lines (imported from bank)
- **Right Column:** GL Entries in System
- Unmatched items count shown in badge

TC-REC-04: Import Bank Statement

Steps:

1. In the workspace, click **Import Statement**
2. System imports mock/CSV bank statement lines

Expected Result:

- Statement lines appear in the left column with description, date, amount

---

TC-REC-05: Auto-Match

Steps:

1. Click **Auto-Match** button

Expected Result:

- System matches statement lines to GL entries by amount and date
- Matched pairs disappear from both columns
- Remaining = unmatched items needing investigation

TC-REC-06: Complete Reconciliation

Steps:

1. Once all items matched (or investigated)
2. Click **Mark as Complete**

Expected Result:

- Reconciliation status → `COMPLETE`
- Green confirmation card shown: "All Caught Up!"

---

10. AR Sub-Ledger (Accounts Receivable)

📖 What is it?

The **AR Sub-Ledger** provides a detailed view of all transactions with each customer — all invoices raised, payments received, credit notes, and the resulting outstanding balance. It is a drill-down into the Trade Receivables GL account, broken down per customer.

📍 Navigation

`Accounting → Sub-Ledgers → AR`

URL: `/account-dashboard/sub-ledger/ar`

✅ Test Cases — AR Sub-Ledger

TC-AR-01: View AR Summary

Steps:

1. Navigate to `Sub-Ledgers → AR`

Expected Result:

- Table lists all customers with: Opening Balance, Total Invoiced, Total Paid, Outstanding Balance

---

TC-AR-02: View Customer Statement (Detail)

Steps:

1. Click on a specific customer (e.g., `Global Supplies Ltd`)

Expected Result:

- Running statement opens: Date, Entry Number, Description, Debit, Credit, Running Balance
- Each row links to the original journal entry

TC-AR-03: AR Aging Report

Steps:

1. Click **AR Aging** tab or navigate to `sub-ledger/ar/aging`

Expected Result:

- Table shows aging buckets per customer:
  - Current (0-30 days)
  - 31-60 days
  - 61-90 days
  - 90+ days overdue

---

11. AP Sub-Ledger (Accounts Payable)

📖 What is it?

The **AP Sub-Ledger** mirrors the AR sub-ledger but for suppliers. It shows all bills received, payments made, and outstanding amounts owed to each supplier.

📍 Navigation

`Accounting → Sub-Ledgers → AP`
URL: `/account-dashboard/sub-ledger/ap`

✅ Test Cases — AP Sub-Ledger

TC-AP-01: View AP Summary

Steps:

1. Navigate to `Sub-Ledgers → AP`

Expected Result:

- List of suppliers with Outstanding AP balance

TC-AP-02: View Supplier Statement

Steps:

1. Click on a supplier name

Expected Result:

- Running statement of all AP transactions

TC-AP-03: AP Aging Report

Steps:

1. Navigate to `sub-ledger/ap/aging`

Expected Result:

- Supplier aging buckets: Current, 31-60, 61-90, 90+ days

---

12. Employee Sub-Ledger

📖 What is it?

The **Employee Sub-Ledger** tracks all financial transactions related to employees — salary payments, advances, deductions, and net balances. Useful for auditing payroll accuracy.

📍 Navigation

`Accounting → Sub-Ledgers → Employee`
URL: `/account-dashboard/sub-ledger/employee`

✅ Test Cases — Employee Sub-Ledger

TC-EMP-01: View Employee Sub-Ledger List

Expected Result: List of employees with total debit (salaries paid), credit (deductions), balance

TC-EMP-02: View Employee Statement

Steps: Click on an employee name **Expected Result:** Running ledger of all salary and expense entries for that employee

---

13. Bank Sub-Ledger

📖 What is it?

The **Bank Sub-Ledger** provides a GL-level view of all transactions for each bank account. This is the internal view of the bank — all debits (deposits) and credits (withdrawals) with running balance.

📍 Navigation

`Accounting → Sub-Ledgers → Bank`
URL: `/account-dashboard/sub-ledger/bank`

✅ Test Cases — Bank Sub-Ledger

TC-BANKLG-01: View Bank Sub-Ledger List

Expected Result: List of all bank accounts with GL-level balance

TC-BANKLG-02: View Bank Account Statement

Steps: Click on a bank account **Expected Result:** All debit/credit entries with running balance, each line links to the originating journal entry

---

14. Inventory Sub-Ledger

📖 What is it?

The **Inventory Sub-Ledger** tracks the financial movement of stock — showing the value of goods received, shipped, consumed in production, and adjustments. Closely tied to the warehouse and production modules.

📍 Navigation

`Accounting → Sub-Ledgers → Inventory`
URL: `/account-dashboard/sub-ledger/inventory`

✅ Test Cases — Inventory Sub-Ledger

TC-INV-01: View Inventory Sub-Ledger

Expected Result: List of items with quantity and value on hand

TC-INV-02: View Item Movement Detail

Steps: Click on a specific item **Expected Result:**

- Shows all inbound (purchase receipt) and outbound (sale/consumption) transactions
- Opening balance, movement lines, closing balance

TC-INV-03: Stock Valuation Report

Steps: Navigate to `sub-ledger/inventory/valuation` **Expected Result:**

- Report showing current value of all items at cost
- Columns: Item, Quantity, Unit Cost, Total Value, Valuation Method (FIFO/Average)

---

15. Fixed Asset Sub-Ledger

📖 What is it?

The **Fixed Asset Sub-Ledger** (also called Fixed Asset Register) tracks all capital assets — their cost, accumulated depreciation, net book value, and disposal history.

📍 Navigation

`Accounting → Sub-Ledgers → Fixed Assets`

URL: `/account-dashboard/sub-ledger/fixed-assets`

✅ Test Cases — Fixed Assets

TC-FA-01: View Fixed Asset Register

Expected Result:

- Table: Asset Name, Acquisition Date, Cost, Accumulated Depreciation, Net Book Value

TC-FA-02: View Asset Detail

Steps: Click on an asset **Expected Result:**

- Full depreciation schedule
- Each period's depreciation entry linked to GL

---

16. Sub-Ledger Reconciliation Dashboard

📖 What is it?

The **Sub-Ledger Reconciliation Dashboard** is a consolidated view showing whether each sub-ledger (AR, AP, Bank, Inventory, Fixed Assets, Employee) is in balance with the corresponding GL control account. Any difference indicates a posting error or missing entry.

📍 Navigation

`Accounting → Sub-Ledgers → Reconciliation`

URL: `/account-dashboard/sub-ledger/reconciliation`

✅ Test Cases

TC-SLREC-01: View Reconciliation Dashboard

Expected Result:

- For each sub-ledger type: GL Balance vs Sub-Ledger Balance
- Status: ✅ Reconciled (difference = 0) or ⚠️ Out of Balance (difference ≠ 0)

TC-SLREC-02: Investigate Out-of-Balance

Steps: Click on an out-of-balance item **Expected Result:** Shows individual entries causing the difference

---

17. VAT Dashboard

📖 What is it?

The **VAT Dashboard** provides a summary of VAT (Value Added Tax) obligations for the current and past periods. It shows Input VAT (on purchases), Output VAT (on sales), and the net VAT liability or refund amount.

📍 Navigation

`Accounting → VAT/Tax → VAT Dashboard`
URL: `/account-dashboard/vat/dashboard`

✅ Test Cases — VAT Dashboard

TC-VAT-D01: View VAT Summary

Steps:

1. Navigate to `VAT/Tax → VAT Dashboard`

Expected Result:

- Period selector (current quarter)
- Summary cards:
  - **Total Output VAT** (collected from customers)
  - **Total Input VAT** (recoverable from purchases)
  - **Net VAT Payable** = Output - Input
- Chart showing monthly VAT trend

TC-VAT-D02: Change Period

Steps:

1. Select a different quarter from the period dropdown

Expected Result:

- Dashboard refreshes with data for selected period

---

18. VAT Setup

📖 What is it?

VAT Setup configures the VAT rates, types, and groups used when posting transactions. This must be done before any VAT transactions can be processed.

📍 Navigation

`Accounting → VAT/Tax → VAT Setup`
URL: `/account-dashboard/vat/setup`

🔧 Three Sub-Tabs

Tab	Purpose
VAT Rates	Define percentage rates (e.g., 5% Standard, 0% Zero Rated)
VAT Types	Classification: Standard, Zero Rated, Exempt, Out of Scope
VAT Groups	Group multiple rates for reporting (e.g., UAE Standard Group)

✅ Test Cases — VAT Setup

TC-VATSETUP-01: View VAT Rates

Steps:

1. Navigate to `VAT/Tax → VAT Setup`
2. Select **VAT Rates** tab

Expected Result:

- Table: Rate Name, Rate %, VAT Type, Actions

TC-VATSETUP-02: Add VAT Rate

Steps:

1. Click **+ Add VAT Rate**
2. Fill:
   - **Rate Name:** `Standard VAT 5%`
   - **Rate Percentage:** `5`
   - **VAT Type:** `Standard`
3. Click **Create Rate**

Expected Result:

- New rate appears in VAT Rates table

TC-VATSETUP-03: Add Zero-Rated

Steps:

1. Click **+ Add VAT Rate**
2. **Name:** `Export Zero Rate`, **Rate:** `0`, **Type:** `Zero Rated`
3. Save

TC-VATSETUP-04: Add Exempt Rate

Steps:

1. Add rate with **Type:** `Exempt` and Rate: `0`

TC-VATSETUP-05: View VAT Types Tab

Steps:

1. Click the **VAT Types** tab

Expected Result:

- Content shown (or "Coming soon" if not yet implemented)

❌ Negative Tests — VAT Setup

Test	Steps	Expected
TC-VATSETUP-N01	Rate > 100%	Enter `150` in rate field
TC-VATSETUP-N02	Blank name	Leave Rate Name empty

---

19. Tax Adjustments

📖 What is it?

Tax Adjustments (also called Tax Transactions) allows manual recording of VAT adjustments that don't come through the normal purchase/sales invoice workflow. Examples: Bad debt relief, VAT on imports, VAT corrections.

📍 Navigation

`Accounting → VAT/Tax → Tax Adjustments`
URL: `/account-dashboard/vat/adjustments`

✅ Test Cases — Tax Adjustments

TC-TAXADJ-01: View Tax Transactions

Steps:

1. Navigate to `VAT/Tax → Tax Adjustments`

Expected Result:

- List of all VAT adjustment entries with: Date, Type, Amount, VAT Amount, Status

---

TC-TAXADJ-02: Create VAT Adjustment

Steps:

1. Click **+ New Adjustment**
2. Fill:
    - **Adjustment Type:** `Bad Debt Relief`

- **Date:** Today
- **Base Amount:** `5000`
- **VAT Rate:** Select `Standard 5%`
- **VAT Amount:** Auto-calculated: `250`
- **Description:** `VAT relief for bad debt customer XYZ`

3. Save/Post

Expected Result:

- Adjustment recorded
- VAT Dashboard updates with this adjustment in period

TC-TAXADJ-03: Filter by Date Range

Steps:

1. Use date range filters on the list page

Expected Result:

- Only transactions within the selected range shown

---

20. VAT Return

📖 What is it?

The **VAT Return** compiles all VAT-taxable transactions for a specific period and generates the official tax return summary to be submitted to the Federal Tax Authority (UAE: FTA). It aggregates Output VAT, Input VAT, and calculates net payable or refundable amount.

📍 Navigation

`Accounting → VAT/Tax → VAT Return`
URL: `/account-dashboard/vat/return`

✅ Test Cases — VAT Return

TC-VATRET-01: Generate VAT Return

Steps:

1. Navigate to `VAT/Tax → VAT Return`
2. Select the **Tax Period** (e.g., Q1 2026: Jan - Mar)
3. Click **Generate Return**

Expected Result:

- Return populates with:
  - **Box 1:** Standard Rated Sales (AED + VAT)
  - **Box 2:** Zero Rated Sales
  - **Box 3:** Exempt Sales
  - **Box 6:** Total Output VAT
  - **Box 8:** Standard Rated Purchases + Input VAT
  - **Box 11:** Total Input VAT (recoverable)
  - **Net VAT Due:** Box 6 - Box 11

TC-VATRET-02: Submit VAT Return

Steps:

1. Review the generated return
2. Click **Mark as Submitted**

Expected Result:

- Return status → `SUBMITTED`
- Locked from further changes
- Timestamp of submission recorded

TC-VATRET-03: View Previous Returns

Steps:

1. Switch period to a past quarter

Expected Result:

- Past return shown with status (Draft / Submitted)

---

21. VAT Reports

📖 What is it?

VAT Reports provides detailed transactional reports for VAT compliance and auditing — showing every taxable transaction in a period broken down by VAT rate.

📍 Navigation

`Accounting → VAT/Tax → VAT Reports`
URL: `/account-dashboard/vat/reports`

✅ Test Cases — VAT Reports

TC-VATRPT-01: View Sales VAT Report

Steps:

1. Navigate to `VAT/Tax → VAT Reports`
2. Select **Output VAT / Sales** report type
3. Select date range

Expected Result:

- Table: Invoice Date, Customer, Invoice No, Net Amount, VAT Rate, VAT Amount

---

TC-VATRPT-02: View Purchase VAT Report

Steps:

1. Select **Input VAT / Purchases** report type

Expected Result:

- Table: Bill Date, Supplier, Bill No, Net Amount, VAT Rate, VAT Amount (recoverable)

TC-VATRPT-03: Export Report

Steps:

1. Click **Export** (CSV/Excel)

Expected Result:

- File downloaded with report data

---

22. GL Reports

📖 What is it?

GL Reports are the core financial reports derived from all posted journal entries. These are the standard financial statements:

Report	Purpose
Trial Balance	Lists all GL accounts with debit/credit totals to verify balance
Balance Sheet	Snapshot of Assets, Liabilities, and Equity at a point in time
Profit & Loss (Income Statement)	Revenue and Expenses for a period, showing net profit/loss
General Ledger Detail	Full transaction history for one or all accounts
Cash Flow Statement	Sources and uses of cash

📍 Navigation

`Accounting → GL Reports`

URL: `/account-dashboard/gl-reports`

✅ Test Cases — GL Reports

TC-GLRPT-01: Trial Balance

Steps:

1. Navigate to `GL Reports`
2. Select **Trial Balance** report
3. Set date: **As of** today

Expected Result:

- Two-column table: Account Code | Description | Total Debit | Total Credit
- **Grand Total Debit = Grand Total Credit** (fundamental accounting rule)

TC-GLRPT-02: Balance Sheet

Steps:

1. Select **Balance Sheet** report

2. Set date range

Expected Result:

- **Assets section:** Total Current Assets + Non-Current Assets
- **Liabilities section:** Current + Long-term Liabilities
- **Equity section:** Share Capital + Retained Earnings
- **Total Assets = Total Liabilities + Total Equity**

TC-GLRPT-03: Profit & Loss

Steps:

1. Select **Profit & Loss** or **Income Statement**
2. Set period (e.g., January 2026 to June 2026)

Expected Result:

- Revenue → Gross Profit → Operating Expenses → Net Profit/(Loss)

TC-GLRPT-04: General Ledger Detail

Steps:

1. Select **GL Detail** report
2. Filter by **Account Code** (e.g., select `Trade Receivables`)
3. Set date range

Expected Result:

- All debit/credit entries for that account with running balance
- Links to originating journal entries

TC-GLRPT-05: Filter by Date Range

Steps:

1. On any report, change the date range to a narrow window (single month)

Expected Result:

- Report data filters to only include entries within that range

---

TC-GLRPT-06: Export Report

Steps:

1. On any report, click **Export to PDF** or **Export to Excel**

Expected Result:

- File downloads with formatted report

🔄 End-to-End Transaction Flow Test

Complete AR Invoice → Payment → Reconciliation Flow

This is the most important end-to-end test to validate the complete accounting cycle.

Step 1: Create Item GL Mapping

- Map `Steel Hanger` item to Sales Revenue, COGS, and VAT accounts

Step 2: Create Party GL Mapping

- Map customer `Global Supplies Ltd` to Trade Receivables account

Step 3: Post Customer Invoice Journal Entry

- Type: `Customer Invoice`
- Line 1: Dr `Trade Receivables` AED 5,250 (Dimension: Customer = Global Supplies Ltd)
- Line 2: Cr `Sales Revenue` AED 5,000 (Dimension: Item = Steel Hanger)
- Line 3: Cr `Output VAT 5%` AED 250

Step 4: Verify AR Sub-Ledger

- Navigate to Sub-Ledgers → AR
- Customer `Global Supplies Ltd` should show AED 5,250 outstanding

Step 5: Record Payment

- Payments Register → New AR Receipt
- Partner: `Global Supplies Ltd`
- Amount: AED 5,250
- Allocate full amount to the invoice
- Create Draft → Post

Step 6: Verify AR Balance = 0

- AR Sub-Ledger for the customer should now show AED 0 outstanding

Step 7: Verify Bank Sub-Ledger

- Sub-Ledgers → Bank → select bank account
- Should show +AED 5,250 entry

Step 8: Reconcile Bank Statement

- Bank Reconciliation Workspace
- Import statement showing +AED 5,250
- Auto-match → Complete reconciliation

Step 9: Run Trial Balance

- GL Reports → Trial Balance
- Debit total = Credit total ✅

📌 Common Error Messages Reference

Error Message	Cause	Resolution
"Journal entry is unbalanced"	Debit ≠ Credit total	Adjust amounts so both sides match
"Only DRAFT journal entries can be edited"	Trying to edit POSTED entry	Create a reversal instead
"A line cannot have both Debit and Credit"	Both filled on same line	Use only Dr or Cr per line
"Item ID is required"	Item GL mapping saved without item	Select item from dropdown first
"Account code already exists"	Duplicate COA code	Use a unique account code
"Please fill required fields"	Missing payment fields	Fill Partner, Amount, and Date

---
